The collaborative online platform, Cities for Global Health - launched by Metropolis and the Euro-Latin-American Alliance of Cooperation among Cities (AL-LAs), with the support and collaboration of United Cities and Local Governments (UCLG) among many other international organizations - has received in the last weeks over 380 initiatives from more than 20 countries and over 80 cities, half of them members of our organisation.
The global crisis generated by the COVID-19 outbreak has been pushing cities of all shapes to give immediate answers to an emergency that is seriously threatening not only citizens’ health, but the social cohesion, the economy and the infrastructures of our urban territories all around the world. The initiatives collected at the platform Cities for Global Health, ranging from gender or education issues, to mobility or social issues, are all oriented to prevent, content or mitigate the consequences derived from the current situation as well as how cities and society will recover once this crisis is over. The debate is now on how those initiatives will be adapted to the new normal that all local and regional governments will have to face.

What does this initiative propose in the face of this pandemic and beyond?

Cities for Global Health is far from being a short-term initiative, instead it has a clear long-term ambition. As urban spaces around the world are currently experiencing different stages of the COVID-19 outbreak, the initiative will evolve according to their needs, offering all sorts of resources, knowledge and specific responses to the pandemic and, at the same time, a space of analysis, discussion and creation positioning cities beyond the outbreak.

It is a knowledge-exchange, connection and inspiring platform where local and regional governments, mayors and municipal administrations are invited to keep sharing their protocols, plans, initiatives and all sort of resources and knowledge in order to join forces to stop the global spread of this infection and future pandemics. Because, as the UN Habitat itself affirms, what we do today will change the cities of tomorrow, to make them safe and inclusive, and resilient for future crises.

Metropolitan governance: the top priority

There is no doubt that the urban spaces will change, and significantly so, after the COVID-19 crisis and the collaboration of central cities and peripheries and administrations of different levels is crucial to deal with this crisis and, in this way, design the cities of the future. In this sense, Cities for Global Health is a platform to showcase what cities are doing and be inspired by others to face the enormous challenge that represents this pandemic to the governance of the cities and regions.
The main aim of this platform is to enhance and foster new avenues for city-to-city cooperation and to create collective solutions to *glocal* problems. Metropolitan governance and collaboration among metropolises and cities are crucial to ensure that not one is left behind this crisis and to improve the quality of life of their citizens.

**An initiative in partnership**

This initiative has notable support from international organizations that join its mission and value its innovative nature and usefulness, to which we want to thank for their collaboration:

The European Metropolitan Authorities (EMA), Mercociudades, the Mediterranean Cities Network (MedCities), the International Organisation for Public Transport (UITP), C40 Cities Climate Leadership Group (C40), the Barcelona Science and Technology Diplomacy Hub (Scitech Diplohub), the Iberoamerican Center for Urban Strategic Development (CIDEU), the World Smart Sustainable Cities Organization (WeGo), the United Nations Development Programme (UNDP), the Global Resilient Cities Network, Local Governments for Sustainability (ICLEI) and the United Nations Office for Disaster Risk Reduction (UNDRR).

For further information about the platform, please contact Mr. Oscar Chamat, our Research and Policy Officer at the Secretariat General (ochamat@metropolis.org)
