

METROAirports project · Meeting #1

30 Nov. 2017

Documents:

The project "METROAirports; Socioeconomic impact and uses of new-generation airports" led by the Metropolitan Area of Barcelona, with Atlanta, Île-de-France and Santiago de Chile as partners, will have its 1st workshop on 30/12/2017 and 01/12/2017.

The goal of this project is to deal with economic and social aspects (creation of jobs, economic activity, mobility, access to housing, security...) of the relationship between the airport's activity and the right to the city. Airports are a main node in any metropolis and accessibility has major significance, as services and activities develop on the landside.

This places major importance on urban planning and management of the airport and its interfaces between the terminal and the city.

For more information, or to participate in the event, please contact the project leader, Ms. Carlota Rosés at croses@amb.cat
